

CHEMTANE

DIESEL FUEL TREATMENT

Improves Performance - Increases Mileage

A Multi-Purpose Additive Ideal for all Grades and Brands of Diesel Fuel

SOLVES DIESEL-RELATED FUEL PROBLEMS
HELPS RESTORE FACTORY PERFORMANCE IN ALL DIESEL ENGINES

IMPROVED PERFORMANCE:

- Enhances cetane of diesel fuel
- Increases mileage and horsepower
- Increases engine life and reduces downtime
- Improves cold weather starting
- Reduces pollutants and smoke
- Extends fuel filter life

Reduced fuel quality and lack of lubricity from ultra-low sulfur fuels lead to a variety of common problems, including hesitation, filter clogging, injector malfunctions, erratic combustion, intolerable emissions, moisture problems, sludge, microbial buildup and poor fuel economy.

MOISTURE ELIMINATION:

CHEMTANE D contains an alcohol-free moisture eliminator to solve moisture and micro-organism problems. By removing free-standing water in the fuel, moisture problems and microbial contamination are eliminated.

ELIMINATES:

- Carbon Deposits
- Clogged Injectors
- Fuel Stratification
- Gum & Varnishes

PROTECTS:

- Valves
- Fuel Injectors
- Injector Pumps
- Filters

REDUCES:

- Black Smoke
- Downtime
- Emissions
- Maintenance Costs

DOSAGE:

Before refilling fuel tank, add **Chemtane D**: 1 ounce to 10 gallons of diesel fuel; 1 quart to 320 gallons, 1 gallon to 1280 gallons. For initial treatment, use a double dosage to remove build-up.

INCREASED LUBRICATION FOR:

- Injectors and Injector Pump
- Top cylinder area
- Rubber O-Rings
- Cylinder Liners

CHEMTANE D will replace the lubricating features of sulfur lost, and will protect the injection system and the upper cylinder area. **CHEMTANE D** contains a seal conditioner which protects the O-rings, fuel pump, and rubber and plastic parts of the fuel system.

Deposits on fuel injectors impede fuel delivery. Deposits on the injector tip create a stream of liquid fuel that dribbles into the combustion chamber. The unburned fuel leaves the engine through the exhaust system in the form of black smoke. **CHEMTANE D** will remove combustion chamber and injector deposits, making diesel fuel burn cleaner.

The combustion improver in **CHEMTANE D** enables more power to be delivered to the piston as it is driven down on the power stroke. This means less downshifting and better performance with improved fuel mileage.
